PROJECTS

Music Library

The main objective of the Online Music Portal is to manage the details of Music, Performer, Album, Customer, and Album Type. The project is totally built at administrative end and thus only the administrator is guaranteed the access.

Front End: HTML (creating web application)

Back End: MySQL (creating database)

Connectivity: PHP (create connection with web application and database)

Transport Schedule

This is an android application used to find out the bus number from one place to another place. User need to give the details of source and destination. Accordingly, it will display the details of the bus number which is going in that route.

Front End: XML (creating android application)

Back End: SQLite (creating database)

Connectivity: Java (create connection with Android application and database)
